OAuth Authentication – New in 2.7.1

- PeeringDB users are often connected to multiple IXPs and meet at the same events
  - OAuth2 defined in RFC 6749 is a third-party authentication framework that lets PeeringDB be an OAuth server
  - Register your application, so people can use their PeeringDB account to login instead of requiring them to register in your application
- Full user control, each PeeringDB user must permit each application to use OAuth
- More details are available here: https://docs.peeringdb.com/oauth/
